**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-34, drawn to an antenna section having a plurality of antenna elements, classified in class 343, subclass 853.
  - II. Claims 35-60, drawn to utilizing capillary pressure of the fluid within the wicks to urge the fluid to travel around the loop, classified in class 165, subclass 104.26.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed Group I does not require the particulars of the subcombination as claimed in Group II. The subcombination has separate utility such as cooling section including a loop (CPL) containing a cooling fluid, and including a wick disposed within the loop in the region of the circuitry of Group II.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
